The VDL Digital Canvas

The best hybrid meeting display for an authentic and inclusive user experience to bridge the gap between in-person and remote attendees.

New all-in-one display solution for Teams, Zoom and VC spaces

For medium and larger spaces (and where Teams sessions participants' thumbnails are too small!) our new VDL Digital Canvas is your go to option.

VDL Digital Canvas

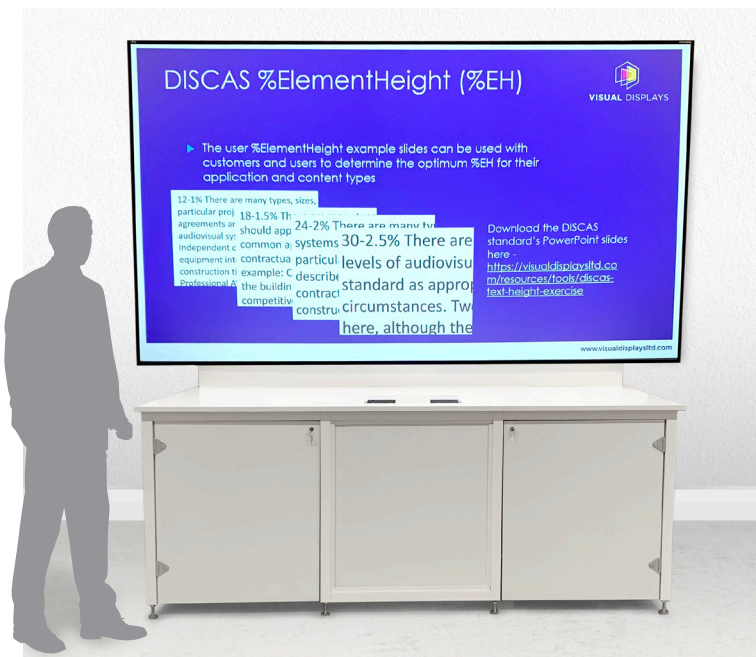

Our new VDL Digital Canvas provides stunning image quality, compliant with AVIXA standards, reaching participants to the back of larger spaces.

Designed for enterprise-level integration to make your clients delighted with the quality (and price), it's also designed for considerable savings and benefits in planning and installation phases.

Part of our Complete Laser Display range at its core, it comprises a standards-curated combination of Epson laser HD UST projector and dnp Supernova ambient light rejecting screen. Housed in an attractive cabinet, the VC camera (or camera bar) and all control and ancillary equipment are all contained within this single unit.

Images of the unit are CAD representations. Please see specifications for information on materials and furniture finishes

The system comes with a mini-rack system on castors as standard which can be pre-delivered for you to pre-populate and fully factory test. Our team delivers the systems to site at pre-booked times, pre-fit your VC camera and align the projectors. A single engineer can then roll the pre-loaded racks into the unit - and complete dozens of systems in a day!

Gone are the days of two or more engineers spending hours making structural fixes in client walls to hang heavy Large Format Displays.

The VDL Digital Canvas has many options, including sizes from 100" up to any size, 4K UHD resolution, secondary system rack, roll-around versions - plus colour and finish choices.
